

WORKING WELL

Clean water.
Well protected.

And

The Milk River Watershed Council Canada in association with the County of Warner

Presents

Working Well Workshop

February 9, 2017 - Heritage Hall, Milk River
Starting at 3pm

Consider how your life would change if you lost your water supply!

Did you know that a poorly maintained water well can put your water supply at risk of contamination and reduce your well yield?

If you are one of 450,000 Albertans who use their water well for household purposes, the key to ensuring your water supply is safe and secure is knowing how groundwater works, learning about your well and understanding how to properly maintain it.

Proper water well siting, construction, maintenance and plugging will help protect your well from biofouling and contamination, save you costly repairs, and ensure your well water yields are sustained over many years.

Find out what you can do to protect your well. Attend the **FREE water well management workshop** being hosted by **The Milk River Watershed Council Canada in association with the County of Warner**, and presented by the **Working Well Program**, with technical expertise provided by Alberta Agriculture and Forestry, Alberta Environment and Parks, Alberta Health Services and licensed water well drillers.

During the workshop we will cover:

- Groundwater – how it works
- Water quality and quantity testing
- Well protection – protecting your well from contamination
- Basic well maintenance
- Water sampling – how to do it

To attend the workshop, please pre-register by calling **Mary** at the **MRWCC** Office at: **403-647-3808**.
